DEAL DECODED · #1 · INDIA · BANKING

HDFC Ltd into HDFC Bank

A fair price for a merger the regulator made expensive in its first years. Since then, neither set of shareholders has been paid for it.

Debjit Mukherjee, IB Independent · Outside-in analysis from public filings · Market data to 19 October 2026 · Deal closed 1 July 2023

PREMIUM PAID	VALUE TO HDFC LTD HOLDERS	CRR/SLR BILL, PV	HDFC BANK TSR	NIFTY BANK	ROE, PRO FORMA → NOW
+3.25%	₹14.5k cr	₹6.4k cr	+1.6%	+49.4%	14.9% → 13.5%

The Verdict

The price was fair. HDFC Ltd's shareholders received a 3.25% premium over the unaffected market ratio — about ₹14,472 cr gross, and about ₹8,500 cr net of the part they funded themselves as owners of 41% of the combined bank. That is the second-lowest of the comparable Indian financial-services deals we could verify — only GRUH into Bandhan, at −7%, was lower (median 14%). They received 41.3% of the bank for contributing about 40% of the combined market value and 43% of look-through earnings. On fundamentals, the bank did not overpay.

The regulator made the first years expensive. Management asked the RBI on day one to phase in the cash reserve and liquidity rules on HDFC Ltd's ₹5.68 lakh crore of borrowings; in April 2023 the RBI refused. On our assumptions — an upper bound — that cost up to ₹2,717 cr a year after tax while the legacy borrowings ran off, about ₹4,400 cr to ₹8,082 cr in present value over three to four years, and on its own erased the deck's illustrative +2.5% pro forma EPS accretion before any funding saving.

Since then, neither set of shareholders has been paid. HDFC Bank has returned +1.6% including dividends since 1 April 2022, against +49.4% for Nifty Bank. Against the merged bank's own starting point, ROE has fallen from 14.9% to 13.5% and core margin from 3.65% to 3.16%; EPS has grown 7.0% a year across the merger against 18.2% before it. The deal cannot be cleanly separated from a sector de-rating and a 2026 leadership change — we show how much of each below — but the scorecard against its own pro forma is weak.

1. The Deal

Item	Detail
Announced / effective	4 April 2022 (before market open) / 1 July 2023 — 15 months, inside the 15–18 months guided
Structure	Composite scheme: HDFC Investments and HDFC Holdings into HDFC Ltd, then HDFC Ltd into HDFC Bank
Consideration	All stock: 42 HDFC Bank shares for every 25 HDFC Ltd shares (1.68x)
Cross-holding	HDFC group's ~21% of HDFC Bank cancelled; the bank becomes 100% public. Former HDFC Ltd holders own 41.3%
Fairness opinions	Morgan Stanley for HDFC Bank; BofA Securities for HDFC Ltd (both: ratio fair)
Valuers	H. C. Ruparelia with Deloitte (bank); Drushti Desai with Bansi S. Mehta & Co. (HDFC Ltd)
Approvals	BSE/NSE (Jul-22), RBI no-objection (4 Jul 2022), CCI (12 Aug 2022), shareholders 99.68% (25 Nov 2022), NCLT (17 Mar 2023), IRDAI (23 Jun 2023)
Stated rationale	'A merger of equals' (Deepak Parekh); 'value accretive for all the stakeholders' (Sashidhar Jagdishan)

2. What Was Paid

The unaffected date is 1 April 2022, the last close before a pre-market announcement. HDFC Ltd closed at ₹2,450.95 and HDFC Bank at ₹1,506.30, a market ratio of 1.6271. The deal ratio of 1.68 was 3.25% richer: ₹2,530.58 per HDFC Ltd share. That valued HDFC Ltd at 3.82x its FY2022 standalone book (3.70x unaffected) and 33.3x standalone earnings, or 20.4x consolidated earnings once the subsidiaries' profits are counted. Those multiples include HDFC Ltd's own stake in the bank, so they are not what was paid for the mortgage book alone.

Against precedent, the premium is low. The four Indian financial-services mergers with verifiable terms paid between −7% (GRUH into Bandhan, the closest housing-finance precedent, where HDFC was the seller) and +20% (IDFC into IDFC First), with a median of 14%. This was priced as what Deepak Parekh called it: a merger of equals, close to the market ratio. The market added about ₹1.25 lakh crore to the two companies on the day.

In an all-stock deal the gross premium overstates what changed hands. HDFC Ltd's holders ended up owning 41.3% of the bank, so they funded that share of their own premium; the net transfer from the bank's existing holders was about ₹8,500 cr. A contribution analysis says the same thing from the other side: HDFC Ltd's holders brought about 40.0% of the combined unaffected market value (net of the cross-holding) and about 42.9% of FY2022 look-through earnings, and received 41.3%.

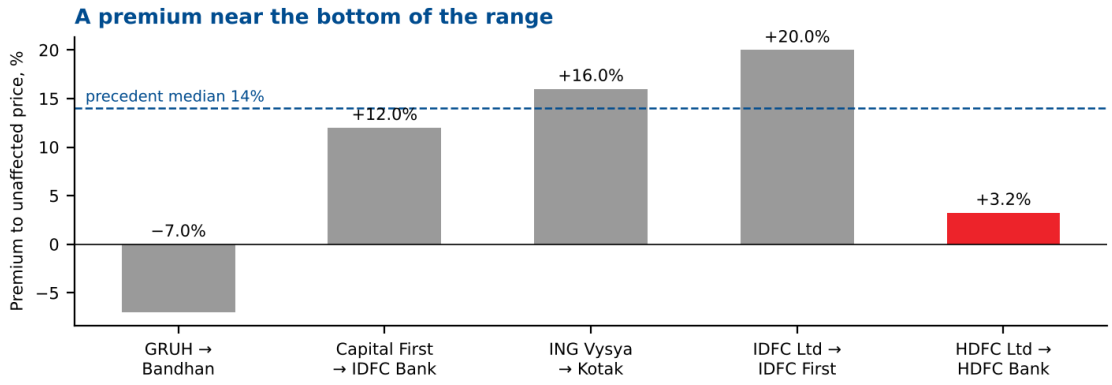

Chart 1. Premium to the unaffected price, Indian financial-services mergers. Source: company filings and press reports of the terms; HDFC from the model.

3. What It Was Supposed to Deliver — and the Bill

Management gave no rupee synergy target. The claims were qualitative: 'EPS accretive from the first year itself' (Keki Mistry), a lower overall cost of funds, a cost-to-income ratio of 32–33% against 36–37% for the bank alone, and a cross-sell opportunity — 70% of HDFC's customers did not bank with HDFC Bank. The deck's pro forma put year-one EPS about 2.5% higher.

The cost of becoming a bank was known on day one: Mistry said the bank had 'requested RBI for phased compliance'. What was new was the answer. On 20 April 2023 the RBI refused: CRR, SLR and LCR applied from the effective date 'without exceptions'; only priority-sector lending was phased over three years. A bank must hold 4.5% of its net demand and time liabilities as cash earning nothing and 18% in government securities; HDFC Ltd, as a deposit-taking housing finance company, held a smaller liquid-asset buffer only against its public deposits. Applied to HDFC Ltd's gross FY2023 borrowings, the bank requirement is about ₹1.28 lakh crore — above the ~₹1 trillion press estimates at the time, because a gross base ignores items that would be netted, so treat our figures as an upper bound. If those balances would otherwise have earned a loan yield of 8.6% (our assumption) and SLR bonds yield 7.2%, the cost is about ₹3,631 cr a year pre-tax and ₹2,717 cr after tax.

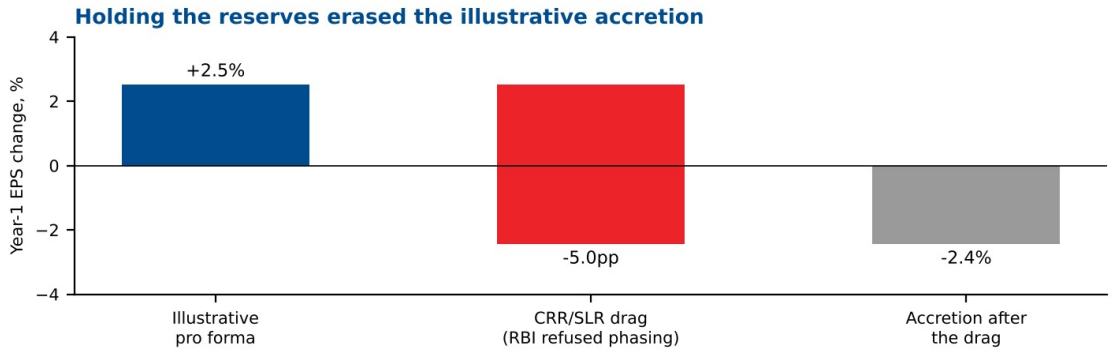

Chart 2. Year-one EPS change: the announcement pro forma (annualised Dec-2021), less the after-tax CRR/SLR drag on HDFC Ltd's FY2022 borrowings. Source: deck pro forma; desk calculation (Accretion-Dilution tab).

CRR and SLR are the permanent price of being a bank; the merger case was that cheaper deposits would pay for them as HDFC Ltd's bonds ran off. So the right way to size the refusal is over the transition, not in perpetuity. At a 13% cost of equity, three to four years of the drag is worth ₹6,415 cr to ₹8,082 cr — about 0.44 times the gross premium and 0.75 times the net transfer at three years. On a narrower base and spread (₹4.6 lakh crore, an 8.0% net loan yield, a 100bp SLR spread) the three-year figure falls to about ₹4,400 cr. The refusal itself — the three-year phase-in that was denied — was worth only about ₹2,312 cr; most of the bill is simply the cost of becoming a bank, which management chose to accept. The sharper number is the break-even: the illustrative pro forma needed about 31bp of funding-cost saving on HDFC Ltd's book to stay EPS-neutral once the reserves were held (the deck printed the accretion as about +3%; our +2.5% and −2.4% use its unrounded figures and HDFC Ltd's FY2022 borrowings). In FY2024, the first merged year, EPS (derived from reported profit and time-weighted shares) grew 8.8%, against 18.6% the year before.

4. Structure and Financing

Sources	₹ crore	Uses	₹ crore
New HDFC Bank shares issued (311.04 crore × ₹1,506.30)	468,519	100% of HDFC Ltd at the deal ratio	468,519
Less: HDFC Ltd's own HDFC Bank shares, cancelled	-175,428		
Net new shares issued	293,091		

There was no cash and no new debt: the bank paid in its own shares. The cancelled cross-holding was worth 39% of HDFC Ltd's market value, so the net new paper was about ₹2.93 lakh crore. Former HDFC Ltd holders ended with 41.3% of a bank with no promoter. In a stock deal the buyer's own share price is the currency, and here both sides bore the same risk: they own the same bank. That is why the right question is not who won the swap ratio, but whether the combined bank has been worth more than the two parts.

The balance sheet changed overnight. In the first merged quarter the loan-to-deposit ratio jumped from 84.5% to 108.4%, borrowings rose from ₹2.1 trillion to ₹7.2 trillion and the CASA ratio fell from 42.5% to 37.6%. HDFC Ltd had funded mortgages with bonds and bank loans; a bank is expected to fund them with deposits.

5. Did It Work? The Scorecard

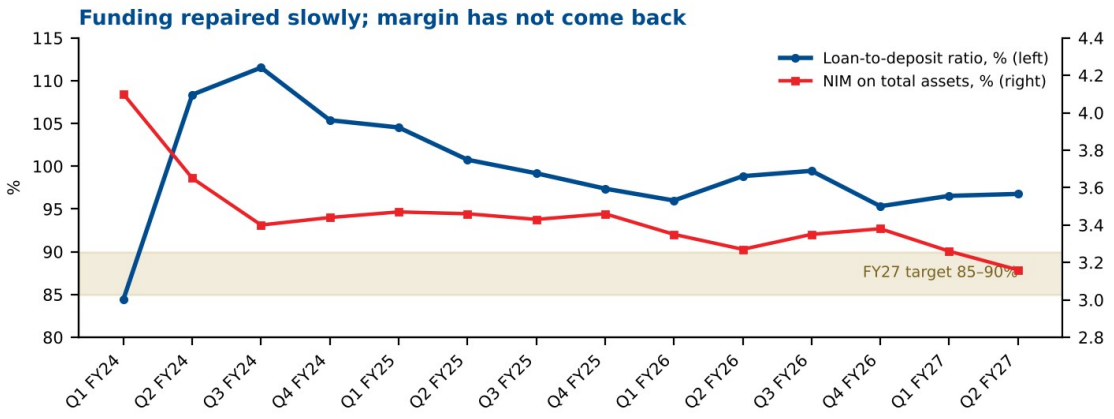

Chart 3. Loan-to-deposit ratio (gross advances ÷ deposits, desk derivation) and NIM on total assets, Q1 FY24 (pre-merger) to Q2 FY27. Source: HDFC Bank results releases and presentations.

Measure	Bank alone	Pro forma / first merged qtr	Latest (Q2 FY27)	Read
Loan-to-deposit ratio	84.5%	108.4%	96.8%	Peak 111.5% (Dec-23); 95–99% for six quarters; FY27 target 85–90%
NIM on total assets (core)	4.10%	3.65%	3.16%	Management: 'trajectory will be upward from the next quarter'
ROE	17.0%	14.9% (deck)	13.5%	FY24 16.1%, FY25 14.6%, FY26 14.3%
CASA ratio	42.5%	37.6%	31.6%	Cheaper deposits have not kept pace with the funding need
Borrowings	₹2.09 trn	₹7.38 trn (Dec-23 peak)	₹4.89 trn	₹2.49 trn retired from the peak; still 2.3x the pre-merger level
Gross NPA	1.17%	1.34%	1.11%	No credit accident
EPS growth, 3 years	18.2% a yr (FY20–23)	—	7.0% a yr (FY23–26)	Profit rose 69%; the extra shares absorbed most of it

Blending in a lower-margin mortgage book was always going to dilute ROE and margin mechanically, so the fair comparison is the middle column — the merged bank's own starting point — against today. It still shows deterioration.

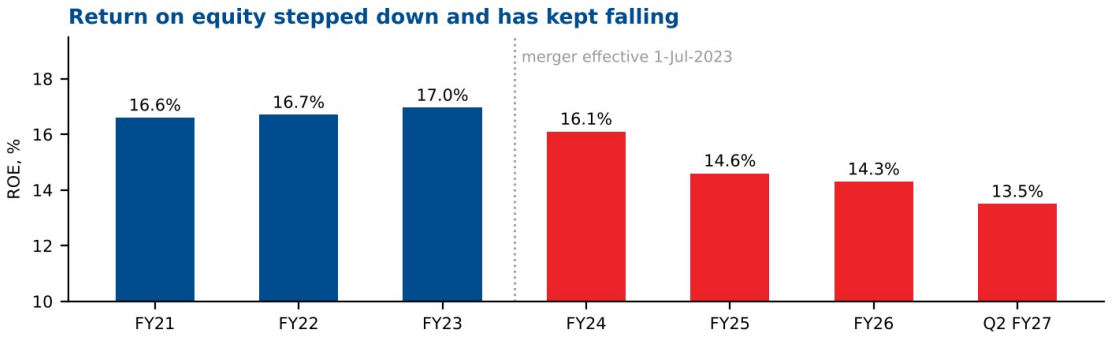

Chart 4. HDFC Bank standalone ROE. FY21–FY23 derived from average net worth; FY24–FY26 and Q2 FY27 as reported. Source: HDFC Bank 6-K filings, annual reports, presentations.

Not everything went wrong. Asset quality held: gross NPAs are lower than in the first merged quarter. About ₹2.5 trillion of expensive legacy borrowings have been replaced, the costliest part of the repair. The bank deliberately slowed lending in FY2025 — advances grew 5.4% against deposits up 14.1% — to rebuild its funding base. What has not come back is the margin, and with it the return on equity.

6. Who Captured the Value

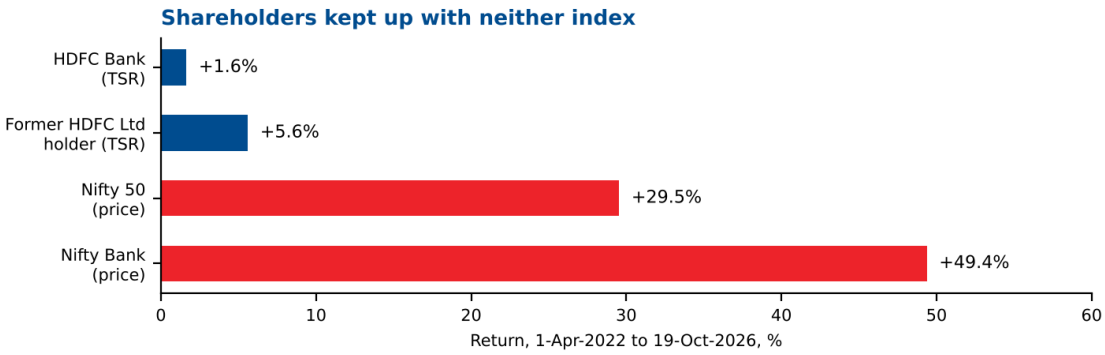

Chart 5. Returns, 1 April 2022 to 19 October 2026. HDFC Bank and former HDFC Ltd holders include dividends (not reinvested); indices are price only, so the true gap is wider. Source: model (Valuation & Verdict tab); NSE.

A holder of 25 HDFC Ltd shares on 1 April 2022 (₹61,274) now has 84 HDFC Bank shares after the 2025 bonus, plus dividends: +5.6%. An HDFC Bank holder made +1.6%. Had the combined group simply tracked Nifty Bank, it would be worth about ₹5.64 lakh crore more than it is today — approximate, and partly the sector and the 2026 governance shock rather than the deal.

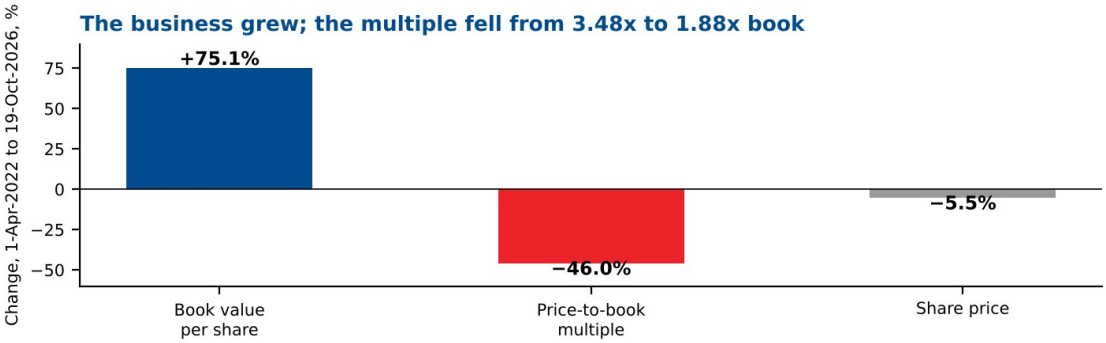

Chart 6. Decomposition of HDFC Bank's price change: book value per share × price-to-book multiple. Source: model; BVPS from HDFC Bank filings (pre-bonus basis).

The decomposition is clean: book value per share grew 75%, partly because the bank issued shares at a high multiple; the multiple fell 46%. Most of that fall is the sector: Nifty Bank's price-to-book fell about 40% over the same window, so HDFC Bank's premium to the sector multiple shrank by about 10% — the part that is specific to this bank. The value did not go to HDFC Ltd's holders — the premium was too small for that. It leaked out through the transition costs, the cost of rebuilding the deposit base and lower returns.

One more event sits inside the window. On 18 March 2026 the bank's chairman resigned, citing practices not in congruence with his 'personal Values and Ethics'; the bank said no specific matters were raised, and its chief executive leaves this month. HDFC Bank's total return up to the day before was about +17%; roughly 16 points of it have gone since. That part of the gap opened two and a half years after the merger closed, and we do not attribute it to the deal.

7. The Strongest Case Against This Verdict

It runs like this: CRR and SLR are the permanent price of becoming a bank and were disclosed on day one; bank stocks de-rated (Nifty Bank's price-to-book fell about 40% against HDFC Bank's 46%); HDFC Ltd's alternative was not the old HDFC Ltd but a non-bank facing tighter rules with no deposit franchise; and the 2026 governance shock, not

the deal, explains much of the recent fall. Most brokers kept Buy ratings after the October 2026 results, several while cutting targets, and management says margins have bottomed.

We accept most of it. That is why we size the reserve bill over the transition, not in perpetuity; why the scorecard uses the merged bank's own pro forma as its baseline; and why we exclude the post-March 2026 fall from the deal's account. What remains is still a number: on price alone Nifty Bank rose 49% — and it includes HDFC Bank, its largest constituent, so the gap against other banks is wider — while HDFC Bank returned 1.6%; and the slide in margin and ROE began in 2023, long before the resignation, with earnings per share growing at well under half the pre-merger pace. The deal was priced fairly; it has not yet earned its keep.

8. What to Watch

Date	Event	What it tells us
27 Oct 2026	Anup Bagchi becomes MD & CEO	A new chief executive owns the next phase; Jagdishan's term ends 26 Oct
Jan 2027	Q3 FY27 results	Whether NIM turns up as guided after the October repo hike
Mar 2027	End of FY27	Whether the loan-to-deposit ratio reaches the 85–90% target (96.8% at Sep-26)
Ongoing	Priority-sector compliance	Management: 'the cost is high'; the three-year phase-in is now largely complete

Methodology and Disclaimer

Outside-in analysis from public filings: the scheme of amalgamation and Reg 30 intimations, HDFC Bank's SEC 6-K filings, the NCLT meeting notices, RBI and IRDAI disclosures, both companies' annual reports and results, and NSE/BSE price data reported by the press where the exchanges could not be read directly. The independent valuers' reports are scanned annexures; their method weights and per-share values were not extractable and are not used. The CRR/SLR cost uses desk assumptions for loan and bond yields, shown with sensitivities in the model. Index returns are price only. Every figure, its source and date are on the Evidence tab of the accompanying model.

Market-cap change on the day (reported)	41,326	83,280
Combined value created on the day	**124,606**	

Both stocks were ~25% below their 4-Apr intraday highs by 19-May-2022: the day-one value creation did not hold.

PRECEDENT TRANSACTIONS — INDIAN FINANCIAL SERVICES

Deal	Announced	Terms		Premium / (discount)	Note
Kotak Mahindra + ING Vysya	20-Nov-2014	725 : 1,000		16.0%	Bank-bank; fairness opinions Avendus, Edelweiss
IDFC Bank + Capital First	13-Jan-2018	139 : 10		12.0%	NBFC into bank; premium derived
GRUH Finance into Bandhan Bank	7-Jan-2019	568 : 1,000		-7.0%	Closest HFC-into-bank precedent; HDFC was the seller
IDFC Ltd into IDFC First Bank	3-Jul-2023	155 : 100		20.0%	Holdco reverse merger
ICICI Ltd into ICICI Bank	25-Oct-2001	1 : 2	n/v		DFI parent into bank; premium not verified
HDFC Bank + Centurion Bank of Punjab	25-Feb-2008	1 : 29	n/v		Premium not verified
HDFC Ltd into HDFC Bank	4-Apr-2022	42 : 25		**3.2%**	
Precedent premium — median (verified deals)				**14.0%**	
Precedent premium — 25th percentile				7.3%	
Precedent premium — 75th percentile				17.0%	
HDFC premium vs precedent median (pp)				-10.8	

CONTRIBUTION ANALYSIS — WHAT HDFC LTD HOLDERS BROUGHT VS WHAT THEY RECEIVED

HDFC Bank FY2022 consolidated PAT attributable	38,053
HDFC Ltd FY2022 consolidated PAT attributable (includes its share of the bank)	22,595
HDFC Ltd's stake in HDFC Bank (equity-accounted)	21.0%
HDFC Ltd earnings excluding its share of the bank	14,604
Combined look-through earnings (bank + HDFC Ltd ex bank stake)	52,657
HDFC Ltd holders' share of look-through earnings	**42.9%**
HDFC Ltd holders' share of combined unaffected market value (net of cross-h	**40.0%**
Ownership of the combined bank they received	**41.3%**

Desk calculation; assumes HDFC Ltd's consolidated PAT equity-accounts 21% of HDFC Bank's consolidated PAT. Received (41%) sits between the market-value (40%) and earnings (43%) contributions: on fundamentals the bank did not overpay.

Synergies claimed vs the regulatory bill

Management gave no rupee synergy target. The quantifiable item is a dis-synergy: RBI refused to phase CRR/SLR on HDFC Ltd's liabilities. Yields are desk assumptions (blue) — see Sensitivities.

WHAT MANAGEMENT CLAIMED (4-APR-2022)	
EPS accretion	'EPS accretive from the first year itself' (K. Mistry); deck pro forma EPS ~65 → ~67
Cost of funds	'the overall cost of funds will come down' (K. Mistry)
Cost-to-income	Merged ~32–33% vs 36–37% for the bank alone (S. Jagdishan)
Cross-sell	70% of HDFC customers don't bank with HDFC Bank; >70% of bank customers have no mortgage
Rupee synergy target	None disclosed

THE REGULATORY DIS-SYNERGY — CRR AND SLR ON HDFC LTD'S LIABILITIES		
Liabilities brought in (HDFC Ltd gross borrowings, FY2023) — NDTL proxy; uppe	568,222	
Cash reserve ratio (earns nothing)	4.50%	
Statutory liquidity ratio (held in G-secs)	18.00%	
Yield on the loans these balances displace (desk assumption)	8.60%	
Yield on SLR G-secs (desk assumption, 10-yr ~7.1–7.3% in 2023)	7.20%	
Tax rate	25.17%	
CRR balance required	25,570	
SLR balance required	102,280	
Total locked in reserves	**127,850**	*Press estimates were ~Rs 1 lakh crore; ours is ~28% higher because the base is gross borrowings — treat as an upper bound.*
Pre-tax earnings drag per year	3,631	
AFTER-TAX EARNINGS DRAG PER YEAR	**2,717**	
HDFC Bank P/E at the unaffected price (FY2022 EPS) — memo	22.55x	
Cost of equity used to discount the drag (desk assumption)	13.0%	
Years of transition (close to Sep-2026 is ~3.25 years)	3	
PRESENT VALUE OF THE DRAG OVER THE TRANSITION	**6,415**	
Memo: perpetual capitalisation at the bank's P/E (upper bound — NOT used; Cl	61,267	
Gross value transferred by the premium	14,472	
Net transfer from legacy HDFC Bank holders	8,500	
PV of the drag ÷ gross premium	**0.44x**	
PV of the drag ÷ net transfer	**0.75x**	

The risk was disclosed on day one (management had 'requested RBI for phased compliance'); the surprise was the refusal. The SLR leg is an upper estimate: it ignores mortgage credit cost, zero risk weight on G-secs and liquid assets HDFC Ltd already held. Not modelled: LCR, priority-sector cost, cost-of-funds benefit.

FUNDING REPAIR — WHAT HAS BEEN DELIVERED	
Standalone borrowings at the Dec-2023 peak (Rs bn)	7,377.0
Standalone borrowings, Sep-2026 (Rs bn)	4,890.0
Borrowings retired (Rs bn)	**2,487.0**
Pre-merger standalone borrowings, Jun-2023 (Rs bn)	2,094.2
Borrowings today ÷ pre-merger level (x)	2.3x
Management (Oct-2026 call): ~Rs 2.6 lakh cr of legacy maturities substituted wi	2,600.0

THE REFUSAL ITSELF — VALUE OF THE PHASE-IN THAT WAS DENIED		
Relief under a 3-year phase-in: share of the drag avoided in years 1 and 2	0.67	0.33
PV of the denied phase-in (Rs crore)	**2,312**	

LOWER BOUND — NARROWER BASE AND SPREAD (tested in review)	
Liabilities base, netting inter-bank and intra-group items (Rs crore)	460,000
Net yield on the loans displaced	8.0%
SLR spread: loan yield less G-sec yield	1.0%
After-tax drag per year, lower bound (Rs crore)	1,859
PV over the transition, lower bound (Rs crore)	**4,389**

Accretion / dilution — promised vs realised

Announcement pro forma from the 4-Apr-2022 deck (annualised Dec-2021, standalone). Realised EPS from HDFC Bank results; FY2026 = sum of quarterly standalone EPS, bonus-adjusted ×2.

AT ANNOUNCEMENT — THE DECK'S PRO FORMA (ANNUALISED DEC-2021)

	HDFC Bank	HDFC Ltd	Pro forma
Annualised PAT	35,875	13,388	49,263
Shares (crore)	554		742
EPS (Rs)	64.76		66.39
EPS ACCRETION, ILLUSTRATIVE PRO FORMA (deck printed ~+3%)			**2.5%**

ADJUSTED FOR WHAT RBI LATER REFUSED (CRR/SLR FROM DAY ONE)

HDFC Ltd borrowings at FY2022 (liabilities brought in)	499,681	
After-tax CRR/SLR drag on that base	2,389	
Pro forma EPS after the drag (Rs)		63.17
EPS ACCRETION / (DILUTION) AFTER THE DRAG, BEFORE ANY FUNDING SAVING (FY2022 base)		**-2.4%**
Funding-cost saving needed on HDFC Ltd's book to break even on EPS (bp)		31

REALISED — HDFC BANK STANDALONE EPS (Rs, PRE-BONUS BASIS)

	FY2020	FY2021	FY2022	FY2023	FY2024 (derived)	FY2026
Basic EPS	48.00	56.60	66.80	79.25	86.24	97.20
EPS CAGR, FY2020–FY2023 (three years before the merger)				**18.2%**		
EPS CAGR, FY2023–FY2026 (three years across the merger)						**7.0%**
PAT growth FY2023–FY2026 vs EPS growth (share issuance absorbs the difference)				69.3%		22.6%
FY2024 EPS growth — the 'accretive from the first year' test (derived: FY24 PAT ÷ time-weighted shares)					**8.8%**	
FY2023 EPS growth, the last standalone year, for comparison				18.6%		

FY2026 standalone PAT Rs 74,670 cr = sum of quarterly PAT; includes the Rs 9,130 cr HDB Financial IPO gain, offset by a Rs 9,000 cr floating provision in the same quarter.

Sources & uses, ownership and the balance sheet

All-stock deal: the 'source' is new HDFC Bank shares; the 'use' is 100% of HDFC Ltd. Values at the unaffected HDFC Bank price.

HDFC BANK TOTAL SHAREHOLDER RETURN (dividends not reinvested)	**1.6%**		
Nifty 50, price return	29.5%	17,670.45	22,888.95
Nifty Bank, price return (price index; includes HDFC Bank)	49.4%	37,148.50	55,488.10
Underperformance vs Nifty Bank (pp)	**-47.7**		

A FORMER HDFC LTD SHAREHOLDER (25 SHARES ON 1-APR-2022)

Value on 1-Apr-2022 (25 × Rs 2,450.95)	61,274
Value today: 42 shares -> 84 after bonus x today's close	59,808
HDFC Ltd dividends received (FY22 Rs 30 + FY23 Rs 44, × 25)	1,850
HDFC Bank dividends received since the swap	3,045
TOTAL RETURN	**5.6%**

DECOMPOSITION OF HDFC BANK'S PRICE CHANGE — BOOK GREW, THE MULTIPLE FELL

BVPS, Mar-2022, standalone, reported (Rs)	433.00
BVPS, Sep-2026, standalone, pre-bonus equivalent (Rs)	758.00
Book value per share growth	75.1%
P/B on 1-Apr-2022	3.48x
P/B on 19-Oct-2026	1.88x
Change in P/B	**-46.0%**
Check: (1 + book growth) × (1 + P/B change) − 1 = price return	0.000000

WHAT DROVE THE MULTIPLE — PROFITABILITY

	Bank alone (FY23 / Q1 FY24)	Pro forma at close	Latest (Q2 FY27)	Change vs pro forma (bp)
ROE	17.0%	14.9%	13.5%	-139
NIM on total assets (core)	4.10%	3.65%	3.16%	-49
Loan-to-deposit ratio	84.5%	108.4%	96.8%	-1161
CASA ratio	42.5%	37.6%	31.6%	-600
Cost/income	42.8%	40.4%	39.1%	-130

Pro forma ROE = deck's annualised pro forma PAT ÷ pro forma net worth (Dec-2021). Other 'pro forma' values are the first merged quarter (Q2 FY24); NIM is core (reported 3.4%).

VALUE ACROSS THE WHOLE GROUP (APPROXIMATE)

Combined unaffected value: bank + HDFC Ltd − cross-holding (Rs crore)	1,112,276		
HDFC Bank market value today (shares today x close)	1,097,804	1,541.86	*<- shares today, crore (6-K paid-up capital Rs 1,541.86 cr, FV Re 1)*
Change in combined value	-1.3%		
Value had the combined group tracked Nifty Bank (price)	1,661,389		
RELATIVE VALUE SHORTFALL VS NIFTY BANK (approx.)	**563,584**		

WHAT ELSE HAPPENED — GOVERNANCE AND THE SECTOR

HDFC Bank close, 18-Mar-2026, before the chairman's resignation (post-bonus)	842.95	
Dividends per pre-bonus share paid by then	81.00	
TSR from 1-Apr-2022 to 18-Mar-2026	17.3%	
Return lost after the resignation (pp)	**15.7**	
Nifty Bank P/B, 1-Apr-2022 → 19-Oct-2026	2.77x	1.67x
Sector de-rating vs HDFC Bank's	-39.7%	-46.0%
HDFC Bank's P/B premium to the sector: then -> now	1.26x	1.12x
Deal-specific relative de-rating (premium to sector)	**-10.4%**	

Chairman Atanu Chakraborty resigned 18-Mar-2026; Sashidhar Jagdishan's term ends 26-Oct-2026 (Anup Bagchi from 27-Oct). Most of the multiple's fall is sector-wide; the deal cannot be cleanly separated from governance and the rate cycle.

THE VERDICT

Price paid: fair. A 3.25% premium (Rs 14,500 cr gross, ~Rs 8,500 cr net of HDFC Ltd holders' own share), second-lowest of the verified precedents (only GRUH-Bandhan, -7%, was lower); holders received 41% for ~40-43% of value and earnings.

The reserve bill: CRR/SLR from day one costs up to ~Rs 2,700 cr a year after tax on desk assumptions (an upper bound), ~Rs 4,400-8,100 cr in present value over a 3-4 year transition, and erases the illustrative ~+2.5% pro forma accretion before any funding saving. The refusal itself (the denied phase-in) was worth ~Rs 2,300 cr.

Outcome: HDFC Bank returned +1.6% (TSR) against +49% for Nifty Bank (price). Book per share grew ~75%; the P/B fell ~46%, of which ~40% was the sector; ROE fell from a 14.9% pro forma to 13.5%.

Who captured the value: neither set of shareholders. The funding repair (~Rs 2.5 lakh cr retired from the peak) is real, but it was paid for with margin and growth; the 2026 governance shock explains much of the most recent fall.

Sensitivities

Each grid recomputes from the inputs on Synergies and Accretion-Dilution; base-case cells are checked against the source sheets.

1) PRESENT VALUE OF THE CRR/SLR DRAG (Rs crore) — loan yield (rows) × years of transition (columns), discounted at Synergies!B24

Loan yield ↓ / years →	2 yrs	3 yrs	4 yrs	5 yrs	6 yrs
8.0%	3,575	5,060	6,374	7,537	8,567
8.3%	4,054	5,738	7,228	8,547	9,714
8.6%	4,532	6,415	8,082	9,556	10,861
8.9%	5,011	7,093	8,935	10,566	12,009
9.2%	5,490	7,771	9,789	11,575	13,156

Base-case check: 8.6% row, 3-year column vs Synergies!B26 (must be 0) 0

Compare with the ~Rs 14,500 cr gross premium and ~Rs 8,500 cr net transfer: at 3–4 years the PV is roughly half the gross premium and close to the net transfer.

Lower bound (computed on Synergies rows 47-51): base Rs 4.6 lakh cr, 8.0% net loan yield, 100bp SLR spread -> ~Rs 1,860 cr a year after tax, ~Rs 4,400 cr PV over 3 years.

2) EPS ACCRETION / (DILUTION) AT ANNOUNCEMENT — funding-cost saving on HDFC Ltd's book (rows, bp) × share of the CRR/SLR drag borne (columns)

Saving (bp) ↓ / drag borne →	0%	25%	50%	75%	100%
0	2.5%	1.3%	0.0%	-1.2%	-2.4%
25	4.5%	3.2%	2.0%	0.7%	-0.5%
50	6.4%	5.2%	3.9%	2.7%	1.4%
75	8.4%	7.1%	5.9%	4.6%	3.4%
100	10.3%	9.1%	7.8%	6.6%	5.3%

Check: 0 bp / 0% cell = deck accretion; 0 bp / 100% cell = adjusted (both must b 0.000000 0.000000

3) JUSTIFIED P/B = (ROE − g) ÷ (Ke − g), g = 8% — ROE (rows) × cost of equity (columns)

ROE ↓ / Ke →	12.0%	12.5%	13.0%	13.5%	14.0%
12.0%	1.00x	0.89x	0.80x	0.73x	0.67x
13.5%	1.38x	1.22x	1.10x	1.00x	0.92x
15.0%	1.75x	1.56x	1.40x	1.27x	1.17x
16.5%	2.13x	1.89x	1.70x	1.55x	1.42x
18.0%	2.50x	2.22x	2.00x	1.82x	1.67x

8.0% ← *growth g (input)*

ROE the current P/B implies at Ke 13% and g 8% 17.4%

Illustrative, not a valuation call: the current P/B implies the market expects ROE to recover above today's 13.5%. Ke is a desk assumption (India 10-yr 7.40%, Oct-2026).
