ExxonMobil

NYSE: XOM | Integrated oil and gas | Valuation date 10 November 2026 | Debjit Mukherjee, IB Independent

REDUCE **Fair value: $154 | CMP: $164.47 (NYSE close, 10-Nov-2026) | Downside: −6.5% | TR −3.9%**

Rated on total return against the US 10-year at 4.98% (US Treasury, 10 November): BUY above the 9.39% cost of equity, ACCUMULATE above 6.98%, HOLD between zero and that hurdle, REDUCE below zero. First rating on ExxonMobil. The call sits 3.9 points below the HOLD line: it becomes a HOLD below about $158, 4% under the price, and ACCUMULATE below about $148. It rests on a beta of 1.0; on the desk's bottom-up beta (0.60) it would be $183, a BUY (see The Strongest Case Against Us).

Investment Summary

The best quarter of the year so far, and the stock has fallen 12% since. ExxonMobil earned $4.23 a share on its adjusted basis in the third quarter ($17.5bn), against the $4.04 consensus (Yahoo, before the print), and set 2027 buybacks at $20bn. The shares closed at $187.25 on the day and $164.47 on 10 November. Energy Products earned $9.1bn, more than Upstream ($7.3bn), on an indicative refining margin of $50 a barrel against $29 in the second quarter and about $10 on XOM's own planning basis. Since the print Brent futures have fallen to about $91.

We value the company on a mid-cycle deck, not on this quarter. Brent averages about $95 in 2026E. We take $84 for 2027 (in line with the June 2027 futures contract at $83.53 on 10 November; the EIA's November outlook has Brent below $90 in the second quarter of 2027 and $77 in the fourth) and $70 real (2024 dollars) from 2028, with a $16 refining margin in 2027 and $12 real after. That gives adjusted EPS of $13.66 in 2026E, $11.42 in 2027E (−8% against the $12.45 consensus) and $11.43 in 2028E. Our earnings rise from there only because XOM's plan adds $25bn of earnings by 2030 at constant prices, which we take in full.

What the price needs. On our model the price is worth paying only if Brent holds about $78 a barrel in real terms from 2028 (about $75 once the dividend is counted). That is above our own $70, above XOM's $65 planning price, and well above the futures market: the December 2030 contract settled at $69.06 on 10 November, about $58 in 2024 dollars. On stockanalysis's forward P/E ExxonMobil trades on 11.6x against 11.2x for Chevron and ConocoPhillips; on the Yahoo 2027E consensus ($12.45) it is 13.2x, and on our 2027E 14.4x.

REDUCE, fair value $154. A DCF on the house deck ($178), EV/EBITDA on mid-cycle 2028E against US peers ($128) and a P/E on 2028E ($133), weighted 50/25/25. Fair value is −6.5% from the price; with the 2.6% dividend yield the total return is −3.9%. The business is executing well. The price assumes it keeps doing so at oil prices the futures market does not.

Results Review — 3Q26 (reported 30 October 2026)

$m, adjusted (new basis)	1Q26	2Q26	3Q26	3Q vs 2Q
Upstream	6,265	9,189	7,308	−20%
Energy Products	2,799	4,099	9,053	+121%
Chemical Products	110	1,214	725	−40%
Specialty Products	651	969	1,283	+32%
Corporate and financing	(1,053)	(791)	(864)	
Adjusted earnings	8,772	14,680	17,505	+19%
GAAP earnings	4,183	14,525	15,413	+6%
Brent / refining margin ($/bbl)	80.61 / 16.3	104.52 / 29.0	97.01 / 50.3	
Production (koebd)	4,594	4,514	4,496	−0.4%

Lower prices and the Guyana entitlement effect cut Upstream by a fifth; refining more than made it up. Cash flow from operations was $25.7bn and free cash flow $19.1bn; XOM paid out $9.4bn ($4.3bn of dividends, $5.1bn of buybacks) and cut net debt to $22.1bn, down about $11bn this year. It raised the quarterly dividend to $1.07 from $1.03, the 44th consecutive annual increase. GAAP earnings sit $2.1bn below adjusted: $2.5bn of timing effects on unsettled derivatives,

partly offset by identified items. XOM changed its non-GAAP basis this year to strip timing effects out, so 2026 adjusted earnings are not comparable with 2025's "excluding identified items" figures, and we compare quarters within 2026 only.

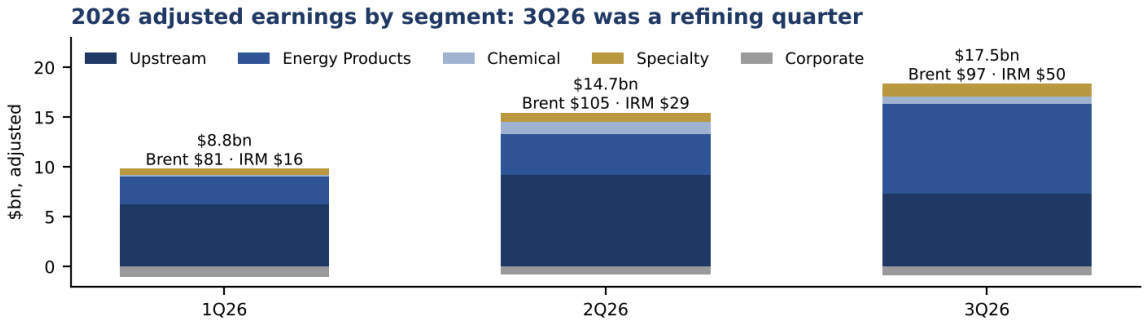

Chart 1. Adjusted earnings by segment, 2026 quarters, $bn, with Brent and the indicative refining margin (IRM). Source: ExxonMobil 3Q26 Ex. 99.1/99.2; model (Segments).

Our fourth quarter takes Brent at $98 and the refining margin at $40, which on a quarter of XOM's published sensitivities gives $15.6bn of adjusted earnings and $56.6bn for 2026E. Brent futures averaged about $106 in the quarter to 10 November, but fell 16% in the week to 6 November and another 6% on 9 November, to $92.57 ($91.49 on 10 November); news reports on 9 November tied the fall to signs of US–Iran talks and freer flows through the Strait of Hormuz. That fall is the start of our bear case. The valuation barely depends on 2026's oil price.

Snapshot

Metric	Value	Read
Price (10-Nov-2026)	$164.47	−12.2% since the print ($187.25 on 30-Oct)
P/E, stockanalysis forward	11.6x	Chevron and ConocoPhillips 11.2x; Yahoo 2027E consensus 13.2x; our 2027E / 2028E 14.4x / 14.4x
EV/EBITDA, TTM (stockanalysis basis, 10-Nov)	8.89x	Chevron 7.43x, ConocoPhillips 5.84x (34% premium to the pair); European majors 4.6x
Dividend yield (next 12 months, 4 × $1.07)	2.60%	44 consecutive annual increases
Free-cash-flow yield, 2027E	6.5%	2027E FCF $43.6bn; dividends + buybacks ~$37bn
EV per proved barrel / per flowing barrel	$35.88 / $154k	YE2025 proved reserves 19.3bn boe (~11 years); 3Q26 production 4.5m boe/d
Net debt, 30-Sep-2026	$22.1bn	0.3x trailing EBITDA on the desk definition
EPS 2026E / 2027E / 2028E (ours)	$13.66 / $11.42 / $11.43	Consensus (Yahoo, 11-Nov) $13.66 / $12.45

Valuation

Why a deck, and why XOM's own sensitivities. Every multiple struck on this year's numbers capitalises $95 oil and a $34 refining margin. We start from XOM's plan path at XOM's planning prices ($65 real Brent, 2010–19 margins), then add XOM's published sensitivities ($0.70bn of earnings per $1 of Brent, $0.80bn per $1 of refining margin) for the gap between our deck and theirs. At 2026's extreme prices those sensitivities overstate what XOM earned: 2026E (nine months reported plus our fourth quarter) delivers 0.65 of the uplift they imply, after Middle East volume losses and weak chemical margins. We apply that factor in every year; set on earnings, it reproduces 2026E operating cash flow within $1.8bn.

Method	Value/share	vs price	Weight	Key input
FCFF DCF, 2026E–2035E	$178	+8%	50%	WACC 9.15%, terminal growth 2% with capex at least D&D; terminal value 55% of EV
EV/EBITDA on 2028E	$128	−22%	25%	6.64x, the Chevron/ConocoPhillips average at 10-Nov (after their 3Q prints)
P/E on 2028E	$133	−19%	25%	12.4x (XOM's FY21–FY25 average forward P/E) × $11.43 = $141 at end-2027, discounted, plus dividends
Dividend discount model	$78	−53%	0%	Cross-check only: buybacks are 54% of 2027E distributions
Blended fair value	$154	−6.5%	100%	Total return −3.9% with the 2.6% yield

Why the methods disagree. The DCF is the only method above the price: weighted, it adds $6.5 a share over the price, while EV/EBITDA takes off $9.2 and the P/E $8.0. The DCF sees what the multiples cannot: earnings rising 19% from 2028E to 2030E as Guyana and the Permian grow, and the free cash flow that growth produces. The multiples price 2028E, before most of it arrives. On the DCF alone the price needs about $62 real Brent; on the blend, about $78. A buyer at $164.47 is paying today for the 2030 plan, at an oil price above the curve.

Three choices lower the value. The first two are standard; the third leans cautious. Noncontrolling interests come off at market value, $20.3bn on 2028E earnings at XOM's own P/E, not the $6.7bn book value. The terminal year raises capex to depreciation, so the business is not run down while it grows. And the multiple is the US peers' after their third-quarter prints: Chevron 7.43x and ConocoPhillips (an E&P) 5.84x, struck on trailing EBITDA earned at about $86 Brent, above our 2028E $77, so applying them to mid-cycle EBITDA understates the value. We assign no premium. On XOM's own five-year average of 7.2x the blend is $157, still a REDUCE; on its own trailing 8.9x, $165, a HOLD. We do not weight the dividend model ($78): XOM returns cash mainly through buybacks, so a dividend-only model would need 6.9% growth in perpetuity to reach the price.

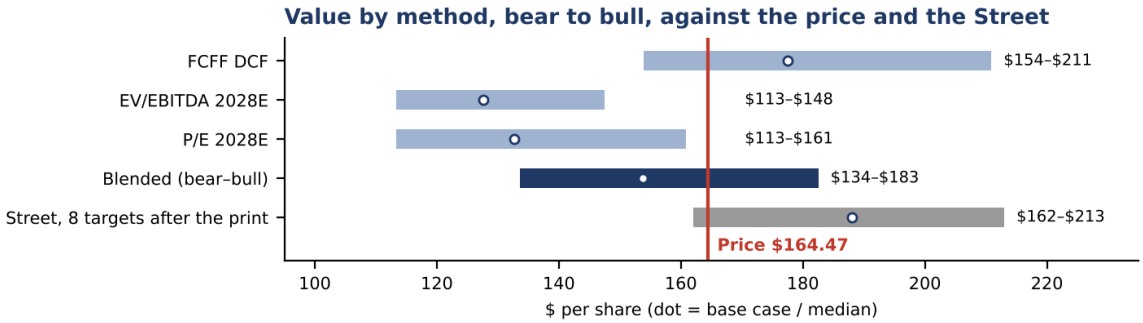

Chart 2. Value by method from bear to bull (Scenarios), against the 8 broker targets we found published after the print, and the price. Source: model; Street sheet.

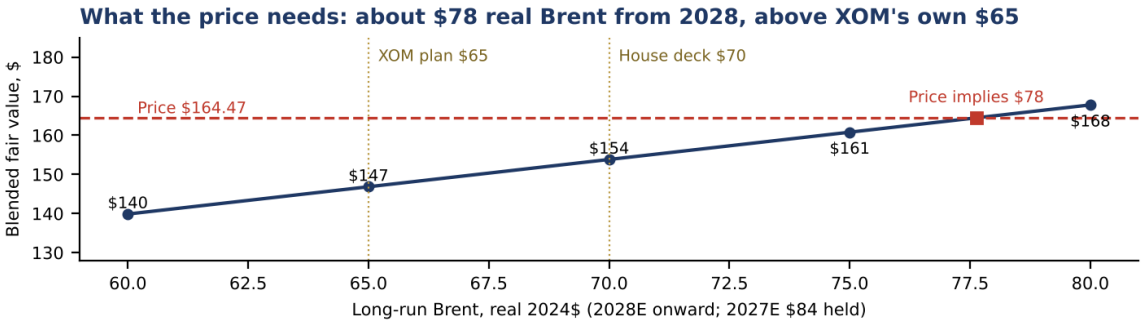

Chart 3. Blended fair value against the long-run real Brent price (2028E onward), refining margin at $12 real, 2027E held at $84. The model is linear in the deck. Source: model (Sensitivities).

Scenario	Long-run Brent / IRM (real)	2027E Brent / IRM	2028E EPS	Fair value	Total return	Rating
Bear: Hormuz reopens	$60 / $9	$70 / $12	$9.70	$134	−16.2%	REDUCE
XOM's planning deck (from 2028)	$65 / $10	$84 / $16	$10.49	$144	−10.1%	REDUCE
Base: house deck	$70 / $12	$84 / $16	$11.43	$154	−3.9%	REDUCE
Base deck, 75% of plan growth	$70 / $12	$84 / $16	$10.89	$142	−10.8%	REDUCE
Bull: tight market	$85 / $16	$95 / $22	$13.95	$183	+13.6%	BUY

Every weighted method re-runs in each case. The cases hold capex, buybacks and dividends, so the bear understates the cut XOM would make to buybacks at $60, and the bull the raise at $85.

Cross-Check Against Third-Party Views

Consensus has now moved after the print: Yahoo shows $13.66 for 2026E and $12.45 for 2027E (23 analysts). Our 2026E matches; our 2027E is 8% below, mostly because we fade the refining margin to $16 next year. We found eight targets published 2–6 November: UBS $213 (Buy), Evercore ISI $200 (Outperform), TD Cowen $193 (Buy), Wells Fargo $189 (Equal Weight), Morgan Stanley $187 (Overweight), Citi $175 (Neutral), DZ Bank $170 (downgraded to Sell) and Freedom Broker $162 (Hold). All eight raised their targets, DZ Bank's from $156 even as it cut to Sell. Their median is $188.00; our fair value is 18% below it, and below MarketBeat's $170.74 consensus (4 November). The Street is raising targets after a quarter it expects to fade; we are pricing the fade.

The Strongest Case Against Us

The discount rate. We use a beta of 1.0. That is a departure from our own method: on Eli Lilly we used Damodaran's pharma unlevered beta (0.89), relevered (Eli Lilly model, COVERAGE/ELI LILLY, Assumptions!B9). Built the same way for ExxonMobil, with Damodaran's January 2026 industry betas weighted by segment earnings as in our ITC model (Assumptions!B9), the beta is 0.60. At that beta the cost of equity is 7.64%, the DCF $234, the blended value $183 and the total return +13.9%: a BUY. At 0.8 it is $167, a HOLD; at 1.2, $144, a REDUCE. Every measured figure is lower still: 0.14 over five years (stockanalysis) and 0.30 for Damodaran's integrated-oil group, at which fair value is $220, a BUY.

We depart from the bottom-up figure because the oil industry betas it rests on were measured while oil moved against a technology-led market, and we would not discount a depleting, commodity-priced business at a 7.6% cost of equity. That is a judgement, and it is the single input that carries this rating. The other side has a number too: at $60 real, close to the futures curve's roughly $58 for 2030, fair value is $140; on XOM's own $65 planning price it is $144, and if only 75% of the 2027–2030 plan growth arrives it is $142.

Key Risks to Our REDUCE

- **Upside: the discount rate.** At the bottom-up beta of 0.60 fair value is $183, a BUY; the call turns HOLD below a beta of about 0.90.
- **Upside: oil stays tight.** Each $5 on our long-run real Brent moves fair value by about $7.0; the call turns HOLD at about $75 real. The bull case (Brent $85 real, $16 margins) is $183, a BUY.
- **Upside: the multiple.** At XOM's own trailing 8.9x EV/EBITDA instead of the peers' 6.6x, the blend is $165, a HOLD. The EV/EBITDA multiple that makes the total return zero is 7.9x.
- **Downside: plan delivery and Hormuz.** At 75% of the plan's 2027–2030 growth fair value is $142; if the Strait of Hormuz reopens fully (our bear case, $70 Brent in 2027, $60/$9 real after) it is $134.
- **Next catalyst: the Corporate Plan update.** XOM's last plan update was on 9 December 2025. A new one would reset 2027–2030 capex, the earnings-growth target and the buyback framework; we have not confirmed a 2026 date. A non-binding Venezuela memorandum (9 November) has no terms; we model nothing for it.

Company Overview

ExxonMobil is the largest US-listed integrated oil company: Upstream (oil and gas production of about 4.5 million barrels of oil equivalent a day, led by the Permian Basin, Guyana and LNG), Energy Products (refining and fuels), Chemical Products and Specialty Products (lubricants and basestocks). It bought Pioneer Natural Resources in May 2024 and said in December 2025 that synergies were running at about $4bn a year, double its initial $2bn estimate. It reports $16.9bn of structural cost savings since 2019 against a $20bn target for 2030. Since 1 July 2026 the listed parent is ExxonMobil Holdings Corporation, a Texas company; shares were exchanged one for one.

Brent, long run, real 2024$ (2028E onward)	$70.00	*House deck. XOM's plan uses $65; Dec-2030 futures ~$58 in 2024$ (row 72)*
Refining margin (IRM), long run, real 2024$	$12.00	*House deck: above XOM's 2010–19 basis (~$10) for refinery closures; 2Q26 $29.0, 3Q26 $50.3*
Brent 2027 (nominal)	$84.00	*Futures 10-Nov settles (Yahoo): Jan-27 $91.49, Jun-27 $83.53, Dec-27 $77.64 (contracts BZF27/BZM27/BZZ27). EIA STEO 10-Nov: below $90 in 2Q27, $77 in 4Q27*
Refining margin 2027 (nominal)	$16.00	*Desk: fades from ~$34 (2026E) toward the long-run margin*
Brent 4Q26E	$98.00	*Front-month futures averaged $105.8 over 29 sessions to 10-Nov (Yahoo BZ=F); the 10-Nov settle ($91.49) assumed for the rest. EIA (10-Nov): ~$100 for Nov–Dec*
Refining margin 4Q26E	$40.00	*Desk: 3Q26 $50.3 easing*
XOM plan Brent, real 2024$	$65.00	*Corporate Plan, 9-Dec-2025*
XOM plan refining margin, real 2024$ (2010–19 basis)	$10.00	*Corporate Plan basis, ~$10*
XOM sensitivity: earnings per $1/bbl Brent, after tax ($bn/yr)	0.70	*XOM Sensitivities and Key Assumptions (updated 31-Jul-2026)*
XOM sensitivity: earnings per $1/bbl refining margin ($bn/yr)	0.80	*Same source*
PLAN PATH AND CAPITAL ALLOCATION		
Plan: 2024 earnings baseline at plan prices	24.0	*Corporate Plan, Dec-2025 (constant-price baseline)*
Plan: earnings growth by 2030 vs 2024 at plan prices	25.0	*Corporate Plan: +$25bn; straight-line 2024→2030, then inflation only*
Plan: 2024 cash flow from operations baseline	47.0	*Corporate Plan*
Plan: cash-flow growth by 2030	35.0	*Corporate Plan: +$35bn*
Cash capex 2027E–2030E ($bn/yr)	30.0	*Plan range $28–32bn a year; midpoint. Inflation after 2030*
Cash capex 4Q26E	7.5	*9M26 $19.98bn; FY26 plan $27–29bn implies 4Q $7.0–9.0bn*
Share buybacks 2027E–2030E ($bn/yr)	20.0	*2027: $20bn announced 30-Oct (Ex. 99.1). 2028–30 desk; inflation after 2030*
Share buybacks 4Q26E	5.0	*3Q26 $5.1bn; $20bn 2026 pace*
Quarterly dividend from 4Q26 ($/share)	$1.07	*Declared 30-Oct, up from $1.03 (44th consecutive annual increase)*
Dividend growth, annual raise each 4Q	4.0%	*Desk: in line with recent raises (FY21–25 DPS CAGR 3.5%; 2026 raise 3.9%)*
Effective tax rate (EBITDA gross-up)	27.0%	*FY25 27.9%; 9M26 25.7% (Ex. 99.2)*
Noncontrolling share of earnings	3.70%	*9M26: 1,254 of 34,121 (Ex. 99.2)*
Depreciation and depletion 2027E	30.0	*9M26 $22.26bn; 3Q26 $6.80bn*
Depreciation growth after 2027	2.0%	*Desk*
Interest expense ($bn/yr)	0.90	*9M26 $0.71bn; FY25 $0.60bn*
Price capture factor (calibrated to 2026E; Forecast row 60)	0.65	*Share of XOM's published sensitivities that 2026E actually delivered vs the plan path*
EV/EBITDA multiple applied	6.6x	*US peers CVX/COP average at 10-Nov, post-3Q (Peer Comps); alternative: XOM five-year average (EV EBITDA row 41)*
Forward P/E multiple (XOM five-year average)	12.4x	*Year-end forward P/E FY2021–FY2025*
Plan delivery: share of the 2027–2030 plan growth delivered	100%	*Desk: full delivery (2026 is reported, so the calibration is unaffected)*
Noncontrolling interests at market value ($bn)	20.3	*2028E NCI share of earnings × XOM five-year forward P/E (book $6.7bn, row 17)*

BOTTOM-UP BETA — Damodaran Jan-2026 unlevered (cash-corrected) by segment, FY2025 earnings weights, relevered

	Unlevered β	Weight
Upstream — Oil/Gas (Production and Exploration), 142 firms	0.58	67.2%
Energy Products — Oil/Gas Distribution, 23 firms (Damodaran has no refining industry; closest)	0.47	21.0%
Chemical Products — Chemical (Basic), 29 firms	0.64	3.2%
Specialty Products — Chemical (Specialty), 59 firms	0.82	8.6%
Unlevered bottom-up beta (earnings-weighted)	0.58	
Relevered at XOM's debt/equity (market) and 21% tax: the desk's bottom-up method (row 69)	**0.60**	
Damodaran Oil/Gas (Integrated) industry beta, levered (4 firms) — regression-based, not used	0.30	

Eli Lilly model (COVERAGE/ELI LILLY, Assumptions!B9): Damodaran pharma unlevered 0.89, relevered; 0.45 regression beta rejected. ITC model (Assumptions!B9): Damodaran unlevered betas by segment.

Brent futures, December 2030 contract: settlement 10-Nov-2026 (Yahoo BZZ30.NYM)	$69.06
Same in 2024 dollars (deflated at row 26 to Dec-2030)	$58.21

ExxonMobil — Forecast on the house deck, 2026E–2035E ($bn unless stated)

Method: XOM's plan path at XOM's plan prices, plus XOM's own price and margin sensitivities × (house deck − plan deck), scaled by the capture factor calibrated on 2026E (row 60).

	2026E	2027E	2028E	2029E	2030E	2031E	2032E	2033E	2034E	2035E

Refining margin 4Q26E	$40.00		
9M26 adjusted earnings (reported)	40.96		
3Q26 adjusted earnings (reported)	17.51		
3Q26 cash flow from operations ex-WC (reported)	23.43		
4Q26E vs 3Q26: quarter of XOM's sensitivities × deck change	(1.89)		
4Q26E adjusted earnings	15.62		
2026E adjusted earnings	**56.58**		
4Q26E cash flow from operations ex-WC	21.55		
4Q26E cash capex	7.50		
2026E cash flow from operations ex-WC (9M26 59.551 reported)	81.10		
2026E cash capex (9M26 19.976 reported)	27.48		
2026E depreciation and depletion (9M26 22.263 + 3Q26 run-rate 6.803)	29.07		
2026E plan earnings at plan prices / uncalibrated uplift	32.33	37.44	
CAPTURE FACTOR: (2026E earnings − plan) ÷ uncalibrated uplift	**0.648**		
Check: 2026E CFO ex-WC implied by plan + captured uplift (vs row 56)	82.91	1.81	*← difference, $bn; the calibration is set on earnings and checked on cash flow*
9M26 adjusted EPS (reported, $)	$9.82		

PLAN PATH COMPONENTS (straight line 2024→2030 at plan prices, inflation only after 2030)

Plan earnings growth after 2026 at 100% delivery	0.0	4.2	8.3	12.5	16.7	17.1	17.5	17.9	18.4	18.9
Plan cash-flow growth after 2026 at 100% delivery	0.0	5.8	11.7	17.5	23.3	23.9	24.5	25.1	25.8	26.4
Plan earnings held at the 2026 step (2026 = 2024 base + 2/6 of growth)	32.3	32.3	32.3	32.3	32.3	33.1	34.0	34.8	35.7	36.6
Plan cash flow held at the 2026 step	58.7	58.7	58.7	58.7	58.7	60.1	61.6	63.2	64.8	66.4

The capture factor is below 1 because 2026 delivered less than XOM's linear sensitivities imply at extreme prices (Middle East volume losses, chemical margins below the 2010–19 basis).

Applying it to every later year is a desk judgement; Sensitivities shows the value at XOM's sensitivities taken at face value (factor 1.0).

ExxonMobil — FCFF DCF at WACC, mid-year convention ($bn)

4Q26E is the cash flow from 1-Oct (net debt is at 30-Sep). Terminal value on 2036E FCFF, mid-year adjusted.

	4Q26E	2027E	2028E	2029E	2030E	2031E	2032E	2033E	2034E	2035E

Present value	14.1	41.9	38.7	40.2	41.1	38.6	36.2	34.0	31.9	30.0
Sum of PV, 4Q26E–2035E	346.7									
FCFF 2036E: 2035E with capex raised to D&D (no disinvestment), × (1 + g)	63.9									
Terminal value at end-2035 (Gordon, × (1+WACC)^0.5 for mid-year flows)	934.3									
Years to end-2035	9.14									
PV of terminal value	419.7									
ENTERPRISE VALUE	**766.5**									
Less net debt, 30-Sep-2026	22.1									
Less noncontrolling interests (market value at end-2027, not discounted: cautious)	20.3									
Equity value	724.1									
DCF VALUE PER SHARE ($)	**$177.52**									
Terminal value share of EV	54.8%									
Implied terminal EV/EBITDA (TV ÷ 2036E EBITDA)	7.6x									
2035E capex less D&D (negative = disinvestment; row 11 raises capex to D&D in the terminal year)	(1.2)									
EV ÷ 2027E EBITDA (desk definition)	8.0x									

ExxonMobil — EV/EBITDA on mid-cycle 2028E vs US integrated peers ($bn)

2028E is the first year fully on the long-run deck. Peer multiples are stockanalysis TTM; XOM's EBITDA is restated to that basis (row 16) so like is compared with like.

9M26 pre-tax income (Ex. 99.2)	47.63
9M26 interest expense	0.71
9M26 depreciation and depletion	22.26
FY25 pre-tax income (10-K)	41.27
FY25 interest expense	0.60
FY25 depreciation and depletion	25.99
9M25 pre-tax income	33.24
9M25 interest expense	0.44
9M25 depreciation and depletion	18.28
TTM EBITDA to 30-Sep-2026, desk definition	86.50
TTM EBITDA, stockanalysis (read 7-Nov and 11-Nov; unchanged)	77.96
XOM enterprise value at 10-Nov (market cap + net debt)	693.0
Basis factor: stockanalysis ÷ desk EBITDA	0.901
XOM EV/EBITDA, TTM, stockanalysis basis (page: 8.91x at 11-Nov midday)	8.9x
2028E EBITDA, desk definition	94.4
2028E EBITDA, stockanalysis basis	85.1
EV/EBITDA multiple applied (US peer average)	6.6x
Enterprise value at end-2027	564.8
Less net debt, end-2027E	11.1
Less noncontrolling interests (market value)	20.3
Equity value, end-2027	533.4
Shares, end-2027E (m)	3,932
Value per share at end-2027 ($)	$135.66
PV at the cost of equity	$122.47
PV of dividends received to end-2027 (4Q26 + 2027E)	$5.14
EV/EBITDA VALUE PER SHARE ($)	**$127.61**
XOM's EV/EBITDA on 2028E at today's price (stockanalysis basis)	8.1x
Brent average over the peers' trailing twelve months (4Q25–3Q26, $/bbl)	$86.46
Brent in 2028E on the house deck	$77.27

Peer TTM multiples are struck on EBITDA earned at higher oil prices than our 2028E (rows 32–33), so applying them to mid-cycle EBITDA leans cautious.

XOM EV/EBITDA at FY2021 year end (stockanalysis ratios)	7.2x
XOM EV/EBITDA at FY2022 year end (stockanalysis ratios)	5.6x
XOM EV/EBITDA at FY2023 year end (stockanalysis ratios)	6.5x
XOM EV/EBITDA at FY2024 year end (stockanalysis ratios)	7.8x
XOM EV/EBITDA at FY2025 year end (stockanalysis ratios)	9.2x
XOM five-year average EV/EBITDA (through the cycle)	**7.2x**

ExxonMobil — P/E on mid-cycle 2028E EPS

XOM's own year-end forward P/E, FY2021–FY2025 (stockanalysis ratios), averaged across a full cycle (2022 peak, 2025 trough).

Forward P/E at FY2021 year end	9.6x
Forward P/E at FY2022 year end	9.5x
Forward P/E at FY2023 year end	11.4x
Forward P/E at FY2024 year end	14.1x
Forward P/E at FY2025 year end	17.2x
Five-year average forward P/E	12.4x
2028E adjusted EPS ($)	$11.43
Value at end-2027 ($)	$141.23
PV at the cost of equity	$127.49
PV of dividends to end-2027	$5.14
P/E VALUE PER SHARE ($)	**$132.64**
P/E at today's price on 2027E EPS	14.4x
P/E at today's price on 2028E EPS	14.4x
Peer forward P/E, 10-Nov (CVX / COP average, Peer Comps)	11.2x
P/E at today's price on the Yahoo 2027E consensus (Street)	13.2x

ExxonMobil — Dividend discount model (cross-check, 0% weight)

Buybacks are 54% of 2027E distributions ($20bn of ~$37bn), so a dividend-only model misses most of what shareholders receive. Shown for completeness, not weighted.

	4Q26	2027E	2028E	2029E	2030E
Dividend per share ($)	$1.07	$4.32	$4.50	$4.68	$4.86
Years from 10-Nov-2026	0.08	0.64	1.64	2.64	3.64
PV at the cost of equity	$1.06	$4.08	$3.88	$3.69	$3.51

Dividend growth after 2030 (FY21–25 DPS CAGR)	3.47%
Terminal value at end-2030 (mid-year flows)	$88.87
PV of terminal value	$61.28
DDM VALUE PER SHARE ($)	**$77.50**
Terminal value the price requires	$214.98
Perpetual dividend growth the price requires	6.86%

ExxonMobil — Peer multiples after the peers' 3Q prints (US peers at the 10-Nov-2026 close)

stockanalysis statistics, 11-Nov midday, rolled to the 10-Nov close at constant EBITDA and forward EPS (CVX $211.79→$211.22; COP $136.59→$135.59). European majors: 9-Nov close pages (shown, not used).

	Price	EV ($bn)	TTM EBITDA	EV/EBITDA	Fwd P/E
Chevron (CVX) — integrated, 10-Nov	$211.22	432.8	58.3	7.4x	11.2x
ConocoPhillips (COP) — US E&P, 10-Nov	$135.59	173.7	29.7	5.8x	11.2x
Shell (SHEL, ADR), 9-Nov	$98.95	323.7	67.6	4.8x	8.5x
TotalEnergies (TTE, ADR), 9-Nov	$88.02	223.9	48.6	4.6x	7.6x
BP (BP, ADR), 9-Nov	$44.79	159.9	47.2	3.4x	7.1x
ExxonMobil (XOM), 10-Nov — fwd P/E: stockanalysis 11.64x at $165.40, rolled					
	$164.47	693.0	78.0	8.9x	11.6x
US peers average (CVX, COP)				**6.6x**	**11.2x**
European majors median (SHEL, TTE, BP)				4.6x	7.6x
XOM premium to the US average				34.0%	3.8%
Chevron alone (the only US integrated peer)				7.4x	11.2x

European multiples carry listing and policy discounts, so they are shown, not used. ConocoPhillips is an E&P, not an integrated: it trades lower on less downstream. TTM multiples are on EBITDA at ~$86 Brent (EV EBITDA row 32).

ExxonMobil — The Street around the 3Q26 print

Consensus EPS now post-print (Yahoo, 11-Nov); post-print targets are from dated broker notes, two sources where available.

Broker (after the 30-Oct print)	Rating	Old ($)	New ($)	Date
